Contexte du projet

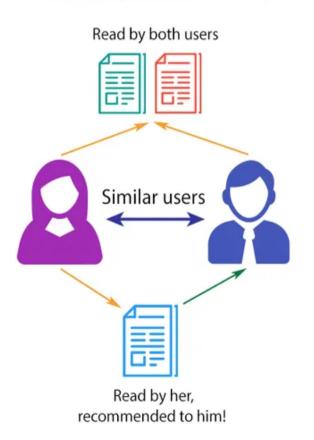

Fonctionnalité essentiel

Entrée : ID utilisateur

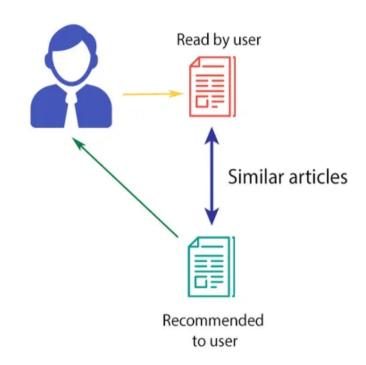

Sortie : articles recommandés

Types de modèles

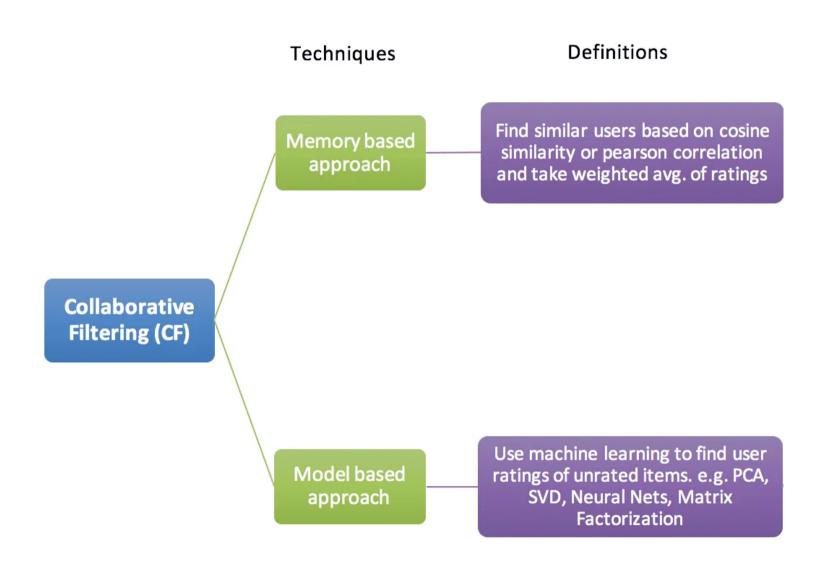

COLLABORATIVE FILTERING

CONTENT-BASED FILTERING

Collaborative filtering

Collaborative filtering

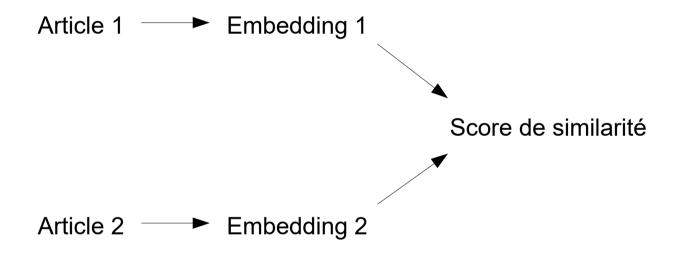

Baseline:

- RMSE = 0,196

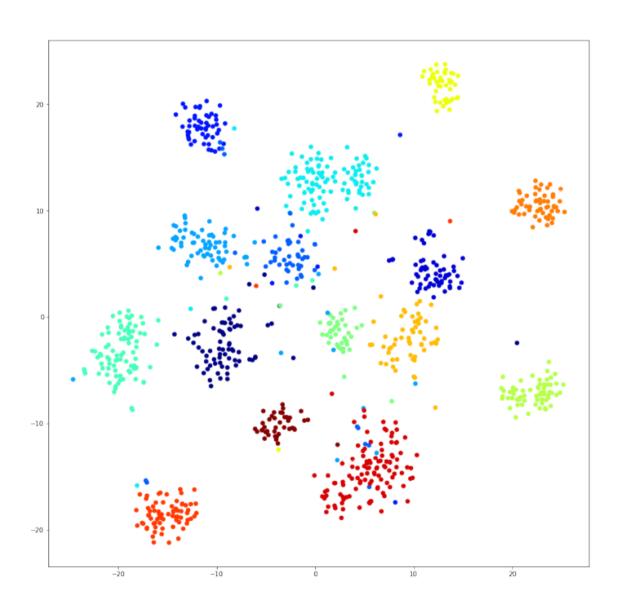

SVD:

- RMSE = 0,136
- grid search RMSE = 0,132

Content based filtering

Content based filtering

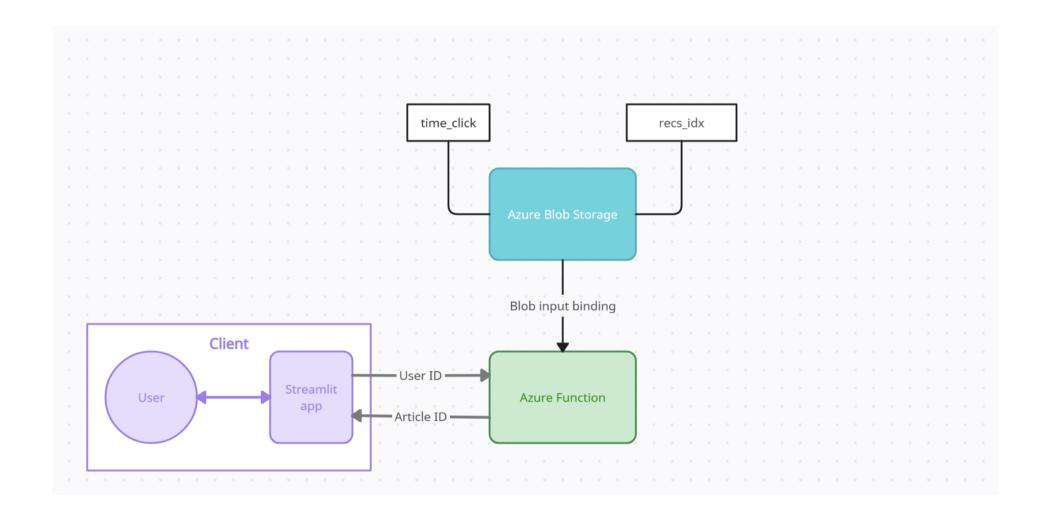

Content based filtering

Méthode : dernier article lu

ID utilisateur → ID article → articles similaires

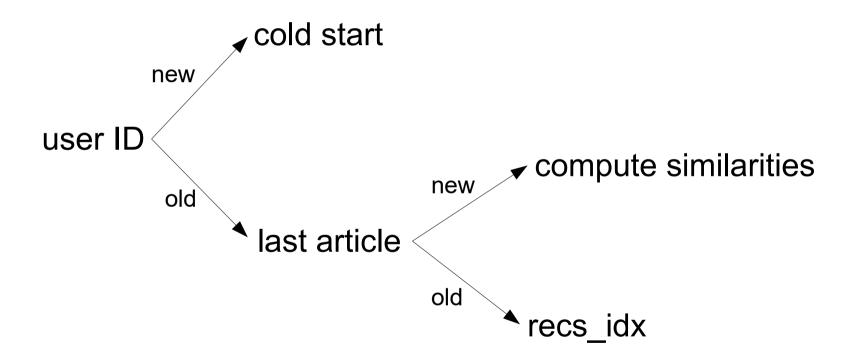

Architecture retenue

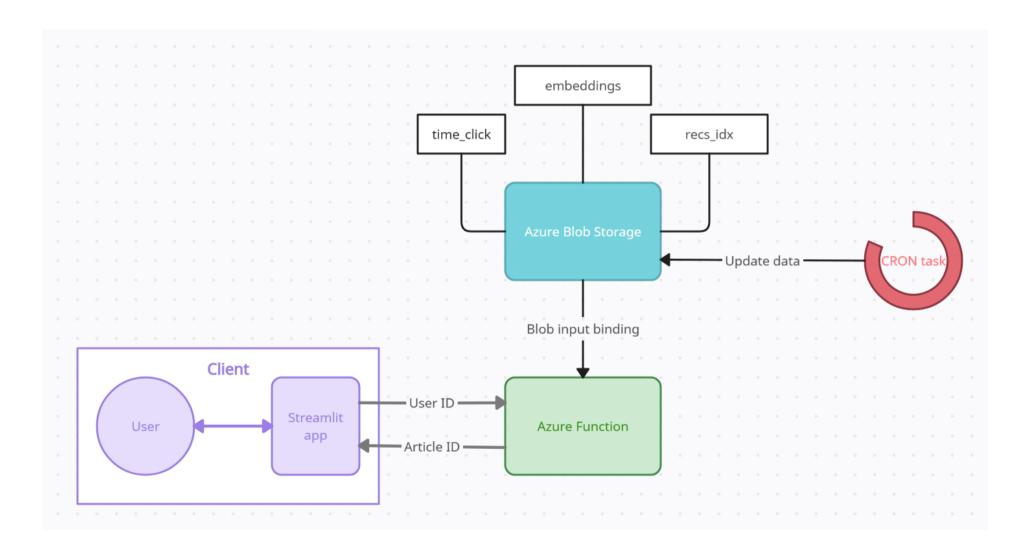

Architecture cible

- nouveaux utilisateurs : démarrage à froid
- nouveaux articles : calcul similarités
- mise à jour des données

Schéma logique cible

Architecture cible

Axes d'amélioration

- plus de modèles
- modèle hybride
- architecture plus efficace

Conclusion
